

Relatório de QA

PR #516 — Padronização de Paginação: URLs, Links Rastreáveis e Componente Único

Projeto	mun-do-zero-km-nextjs
PR	https://github.com/pyxys-inteligencia-digital/mun-do-zero-km-nextjs/pull/516
Branch	refactor/default-pagination-component @ 5d643ca7
Ambiente	http://localhost:3000 (next dev)
Responsável	Abner A Ananias (dev) — evidências capturadas pelo agente de QA
Data	2026-09-25
Gerado em	2026-09-25 11:03

Evidências capturadas pelo agente de QA contra o ambiente indicado. Este relatório **não é veredito de aprovação**: casos divergentes e pendentes estão incluídos com a evidência do que foi observado. A decisão de aprovar a task é do dev/PM.

1. Resumo

15 confirmado	2 divergente	2 pendente	0 pulado
Critério	Descrição	Casos	Situação
CA1	Toda página paginada (Notícias, Notícias-categoria, Ofertas, Webstories, Autores, Festival do Carro Verde) tem URL própria em path (/page/n) acessível via link real, verificável via view-source sem depender de JS.	CT01, CT02, CT03, CT04, CT05	divergente
CA2	Canonical de cada página aponta para si mesma, nunca para a página 1 (exceto a própria página 1).	CT06, CT07, CT08	confirmado
CA3	Um único componente de paginação é usado nas 6 seções com URL + /search (client-side).	CT09	confirmado
CA4	/search pagina os resultados sem regressão de UX, sem exigir mudança de indexação (segue noindex).	CT10, CT11, CT12, CT13, CT14	confirmado
CA5	Decisão de redirect 301 para ?page= de Ofertas já indexadas, tomada com base em relatório do Search Console (não automática).	CT15	pendente
FORA	Fora de escopo que não pode aparecer: rel=next/rel=prev.	CT16	confirmado
EXTRA	Não é critério da task. Conferido como regressão: proteções entregues pelo PR (308 da página 1, 404 de página inválida/fora do range) e Lighthouse (SEO e performance) nas páginas 1 e 2.	CT17, CT18, CT19	divergente

2. Divergências entre entrega e task

#	Divergência	Decisão
D1	CA5 pede decisão do 301 de /ofertas?page= baseada no Search Console, caso a caso (em aberto na task). O PR implementa 301 automático para qualquer /ofertas?page=N (middleware.ts + resolve-offers-page-redirect.ts).	em aberto

D2	Canonical de Reviews está fora de escopo (PRD separado). O PR altera o canonical de /review/page/N (ignora o canonical do CMS em páginas > 1) — src/components/app/review/utis/seio.ts:80.	em aberto
D3	Truncamento visual dos números de página está fora de escopo (follow-up). O PR implementa reticências e janela reduzida no mobile (src/lib/pagination/get-visible-pages.ts).	em aberto
D4	Layout visual dos controles seria anexado pelo Vinicius (fora do documento). O PR entrega layout 'Segmented Group' — confirmar se é o layout aprovado.	em aberto

3. Pontos em aberto

- Tamanho de página de /search: a task deixa em aberto (depende do volume médio de resultados); o PR fixou 12 itens.
- Interpretação de 'sem regressão de UX' (CA4) usada neste plano: mesmos resultados, troca de termo volta para a página 1, scroll ao topo ao paginar, evento de busca no dataLayer sem duplicar, noindex mantido — não confirmada pelo PM.
- Relatório do Search Console sobre URLs /ofertas?page=N indexadas (premissa em aberto da task).
- ACHADO (CT03): /festival-do-carro-verde não rola em Chromium headless 1280×800 (html com altura 0; body 7004px). A paginação fica inalcançável rolando. O commit do PR não mexe no layout do festival, então provavelmente já existia antes. Confirmar num navegador real e, se reproduzir, abrir bug separado.
- ACHADO (CT17): soft 404 em notícias, notícias/[cat], ofertas e autores. Página inválida ou fora do range responde 200 com canonical auto-referenciado (ex.: /ofertas/page/99). Mesmo mecanismo de loading.tsx que o PR já contornou no middleware para o 308. Validar em next build/start antes do merge.
- Ambiente: next dev local com flags de staging (x-robots-tag e meta robots noindex em todas as páginas). Status HTTP e canonical valem, mas indexação real só é verificável em produção.
- ACHADO (CT18): nas rotas com loading.tsx (notícias, notícias/[cat], ofertas, autores), <title>, meta description e canonical são emitidos no <body> para Chrome e Googlebot (streaming metadata do Next 16). Bingbot e facebookexternalhit recebem no <head>. O Lighthouse não detecta description nem canonical. Já existia antes da PR e afeta igual as páginas 1 e 2. Sugestão: task separada para avaliar htmlLimitedBots ou a remoção do loading.tsx nessas rotas.
- CT19 (performance) pendente: rodar `qa lighthouse` contra build de produção (next build && next start -p 3001) ou staging para ter números válidos.

4. Casos de teste

Caso	Critério	Tipo	Título	Status
CT01	CA1	API	Links reais no HTML do servidor (sem JS) nas 6 seções	confirmado
CT02	CA1	API	URL /page/2 responde 200 nas 6 seções	confirmado
CT03	CA1	UI	Navegação real por link muda a URL	divergente
CT04	CA1	UI	Filtros de Ofertas como query em cima do path	confirmado
CT05	CA1	API	Rotas novas SSR entregam conteúdo diferente por página	confirmado
CT06	CA2	API	Canonical da página 2 é auto-referenciado	confirmado
CT07	CA2	API	Canonical da página 1 aponta para a base	confirmado

CT08	CA2	API	Canonical de Ofertas página 2 com filtro	confirmado
CT09	CA3	UI	Mesmo componente nas 6 seções + /search	confirmado
CT10	CA4	UI	/search pagina no client	confirmado
CT11	CA4	UI	Troca de termo volta para a página 1	confirmado
CT12	CA4	UI	Evento de busca no dataLayer não duplica ao paginar	confirmado
CT13	CA4	UI	/search segue noindex	confirmado
CT14	CA4	UI	Poucos resultados não mostram paginação	confirmado
CT15	CA5	Processo	Decisão do 301 baseada no Search Console	pendente
CT16	FORA	API	Sem rel=next/prev	confirmado
CT17	EXTRA	API	308 da página 1 e 404 de página inválida/fora do range	divergente
CT18	EXTRA	API	Lighthouse SEO nas páginas 1 e 2 das 6 seções	confirmado
CT19	EXTRA	API	Lighthouse Performance nas páginas 1 e 2 das 6 seções	pendente

5. Detalhe e evidências

CT01 — Links reais no HTML do servidor (sem JS) nas 6 seções

confirmado

Critério: CA1

Tipo: API

Passos: GET da página 1 e da página 2 de cada seção; extrair os href de paginação e procurar <button> dentro do nav de paginação.

Esperado: <a href> para /page/N no HTML cru de todas as seções; nenhum <button> de paginação.

Observado: Nas 6 seções (páginas 1 e 2), o HTML do servidor traz <a href> para /page/N; 0 <button> de paginação; página atual em ; na página 2 o link '1' e 'anterior' apontam para a base (0 links /page/1). Validado sem JS (curl, sem execução de script).

CT02 — URL /page/2 responde 200 nas 6 seções

confirmado

Critério: CA1

Tipo: API

Passos: GET <base>/page/2 sem seguir redirect.

Esperado: 200 em todas.

Observado: GET <base>/page/2 → HTTP 200 nas 6 seções (noticias, noticias/lancamentos, ofertas, webstories, autores/artur-leite, festival-do-carro-verde).

```

```

CT03 — Navegação real por link muda a URL

divergente

Critério: CA1

Tipo: UI

Passos: Em cada seção: abrir a base, clicar em 2, depois 3, depois 1.

Esperado: URL /page/2 → /page/3 → base (sem /page/1); conteúdo muda.

Observado: Notícias, categoria, ofertas, webstories e autor: clique em 2 → /page/2, em 3 → /page/3, em 1 → volta para a base (sem /page/1), com conteúdo carregado e print de cada etapa + vídeo. FESTIVAL: em Chromium headless 1280×800 a página não rola (html com altura 0px, body 7004px, rolagem de 8000px com a roda do mouse mantém scroll em 0). O link da página 2 fica em y=6060 e não é alcançável rolando, e o clique do Playwright falha com 'element is outside of the viewport'. Acionando o link via JS, a navegação funciona (base → /page/2 → /page/3 → base). O commit 5d643ca7 não altera layout-content.tsx (festival-layout-wrapper: overflow hidden + contain) nem globals.css, então o bloqueio provavelmente já existia antes do PR. Confirmar num navegador real.

CT04 — Filtros de Ofertas como query em cima do path

confirmado

Critério: CA1

Tipo: UI

Passos: Abrir /ofertas?brands=<marca>, conferir href da página 2 e clicar.

Esperado: /ofertas/page/2?brands=<marca> com o filtro aplicado.

Observado: 1ª tentativa com filtro Toyota: clique no botão da marca gera /ofertas?brands=toyota (filtro vai para a query), mas só há 1 oferta → sem paginação (esperado; print 'falha' dessa tentativa é o timeout procurando o link da página 2). Com ?brands=gwm,chevrolet,mitsubishi,hyundai: href da página 2 = /ofertas/page/2?brands=gwm%2Cchevrolet%2Cmitsubishi%2Chyundai; clique leva a essa URL, página ativa = 2 e os cards exibem só marcas do filtro (gwm 5, chevrolet 1, hyundai 1).

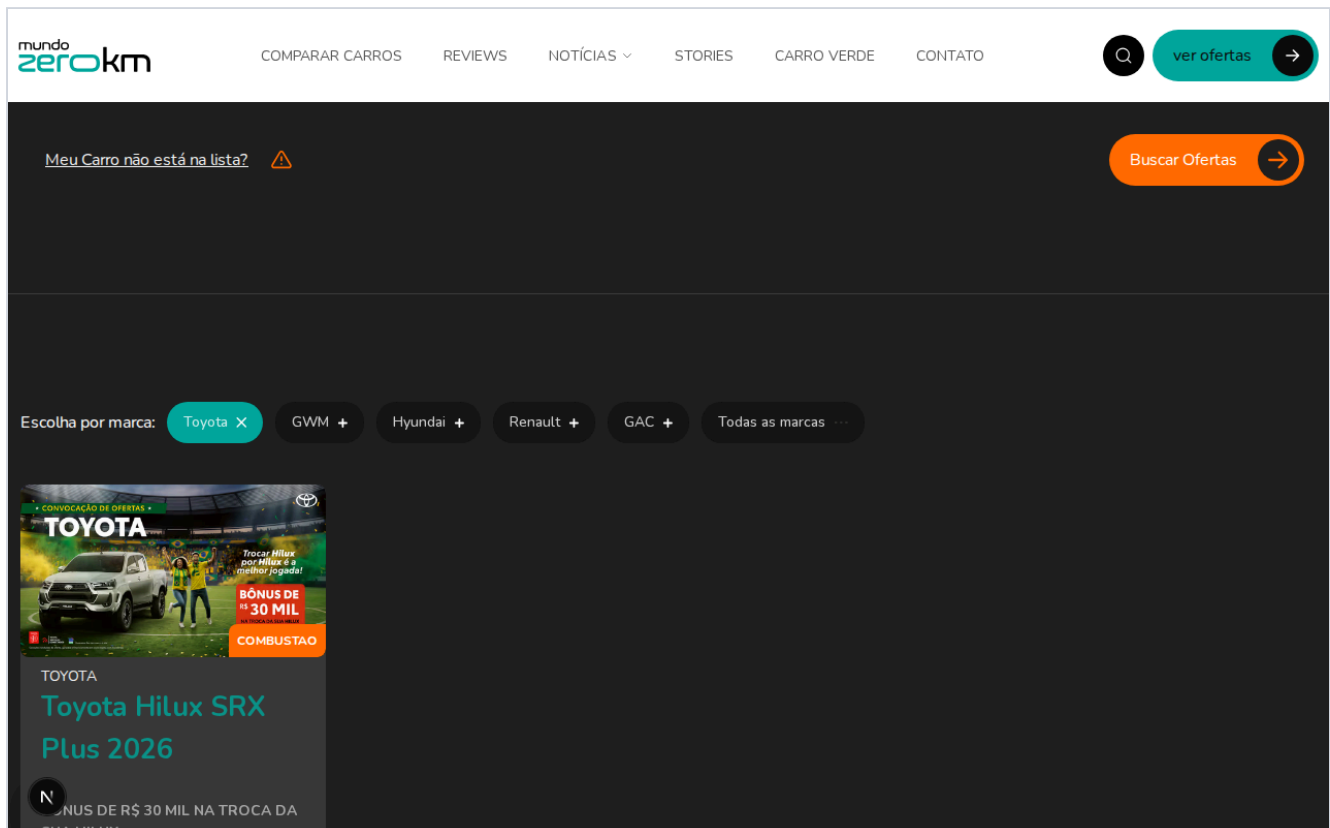

evidencias/CT04-toyota-log.txt

CT05 — Rotas novas SSR entregam conteúdo diferente por página

confirmado

Critério: CA1

Tipo: API

Passos: GET página 1 e 2 de categoria, autor e festival; comparar o primeiro item no HTML do servidor.

Esperado: Itens diferentes já no HTML do servidor.

Observado: Categoria, autor e festival: página 1 e página 2 trazem listas diferentes já no HTML do servidor (0 itens em comum na lista paginada). No festival, 6 destaques fixos se repetem em todas as páginas por design (excluídos da lista paginada).

evidencias/CT05-comparacao-p1-p2.txt

```
# Itens de conteúdo no HTML do servidor (página 1 × página 2)

CT08 — Canonical de Ofertas página 2 com filtro

confirmado

Critério: CA2

Tipo: API

Passos: GET /ofertas/page/2?brands=<marca> e extrair canonical.

Esperado: Registrar valor (tiering de filtro é fora de escopo); esperado /ofertas/page/2.

Observado: GET /ofertas/page/2?brands=gwm,chevrolet,mitsubishi,hyundai → 200, canonical = https://mundozerokm.com.br/ofertas/page/2 (sem os filtros). Tiering de filtro é fora de escopo, só registrado.

evidencias/CT08-ofertas-p2-filtro.txt

```

CT09 — Mesmo componente nas 6 seções + /search

confirmado

Critério: CA3

Tipo: UI

Passos: Print do nav de paginação em cada seção e em /search; conferir remoção dos componentes antigos no código.

Esperado: Mesmo componente visual; arquivos antigos removidos.

Observado: O mesmo componente (layout segmentado, página ativa destacada) aparece nas 6 seções: prints do nav em notícias, categoria, ofertas, webstories, autor e festival (festival com a cor de página ativa do tema). Em /search, mesmo componente em modo client (ver CT10). No código: 5 componentes antigos removidos pelo commit e 11 pontos importando @/components/common/Pagination. Observação visual (layout fora de escopo, D4): no festival (fundo claro), as setas anterior/próxima ativas aparecem em cinza-claro e parecem desabilitadas.

CT10 — /search pagina no client

confirmado

Critério: CA4

Tipo: UI

Passos: Buscar termo com > 12 resultados, ir à página 2.

Esperado: 12 itens por página, URL não muda, scroll ao topo.

Observado: q=carro: 59 resultados → 5 páginas. Página 1: 12 itens, página 2: 12 itens, página 5: 11 itens ($59 = 4 \times 12 + 11$, nenhum resultado perdido). URL fica /search?q=carro em todas as páginas (client-side). Scroll em 2053px antes do clique, 0 depois (volta ao topo). Controles em modo client (<button>), como a task prevê para /search.

```

 evidencias/CT10-search.webm – vídeo anexo na pasta da execução

CT11 — Troca de termo volta para a página 1

confirmado

Critério: CA4

Tipo: UI

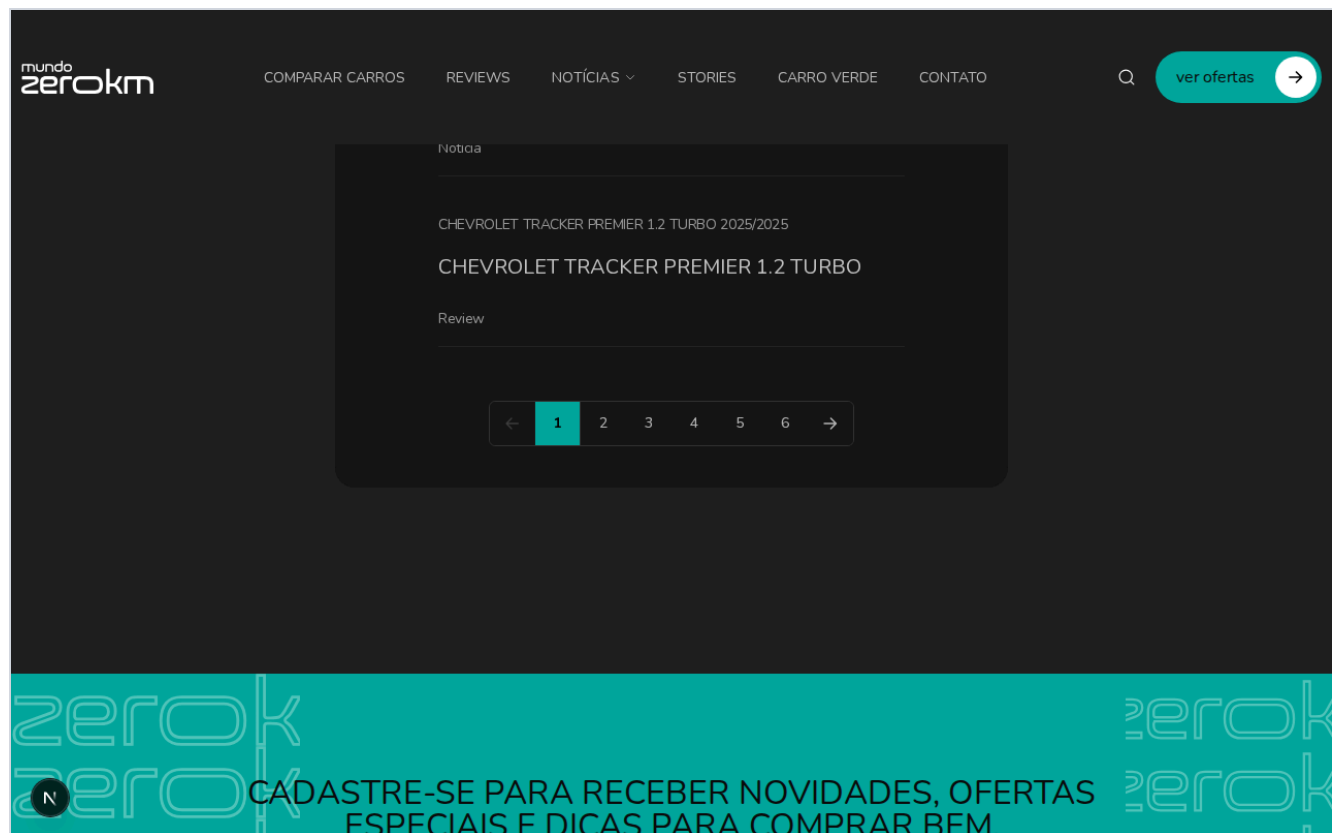

Passos: Na página 2, buscar outro termo.

Esperado: Página 1 ativa.

Observado: Na página 3 de 'carro', uma nova busca por 'suv' (61 resultados, 6 páginas) abre na página 1.

```
// http://localhost:3000/search?q=carro
// (()=>{const nav=document.querySelector('nav:has([aria-label^="Ir para página"]')'); const itens=Arra
y.from(document.querySelectorAll('div.mb-5.py-4')); const dl=(window.dataLayer||[]).filter(e=>e&&typeof

CT12 — Evento de busca no dataLayer não duplica ao paginar

confirmado

Critério: CA4

Tipo: UI

Passos: Buscar, ler dataLayer, paginar, ler de novo.

Esperado: Mesmo número de eventos de busca antes e depois de paginar.

Observado: dataLayer: 1 evento view_search_results para 'carro' nas páginas 1, 2, 5 e 3 (paginar não dispara de novo); o 2º evento só aparece ao trocar o termo para 'suv'.

```
// http://localhost:3000/search?q=carro
// (()=>{const nav=document.querySelector('nav:has([aria-label^="Ir para página"]')'); const itens=Arra
y.from(document.querySelectorAll('div.mb-5.py-4')); const dl=(window.dataLayer||[]).filter(e=>e&&typeof

CT13 — /search segue noindex

confirmado

Critério: CA4

Tipo: UI

Passos: Ler meta robots renderizada de /search?q=carro.

Esperado: noindex.

Observado: Meta robots renderizada em /search?q=carro = 'noindex, nofollow' (aparece 2 vezes no <head>, duplicada). A meta é aplicada no client (useSeo), por isso não aparece no HTML do servidor. O header x-robots-tag noindex vem do ambiente de staging (x-staging-environment: true) e não serve como prova.

evidencias/CT13-search-log.txt

```
01. goto "http://localhost:3000/search?q=carro"
   → status=200 url=http://localhost:3000/search?q=carro
02. wait_ms 6000
03. eval ["({robots_meta: Array.from(document.querySelectorAll('meta[name=robots]')).map(m=>m.content),

CT14 — Poucos resultados não mostram paginação

confirmado

Critério: CA4

Tipo: UI

Passos: Buscar termo com ≤ 12 resultados.

Esperado: Componente não aparece.

Observado: q=cronos: 1 resultado, sem componente de paginação.

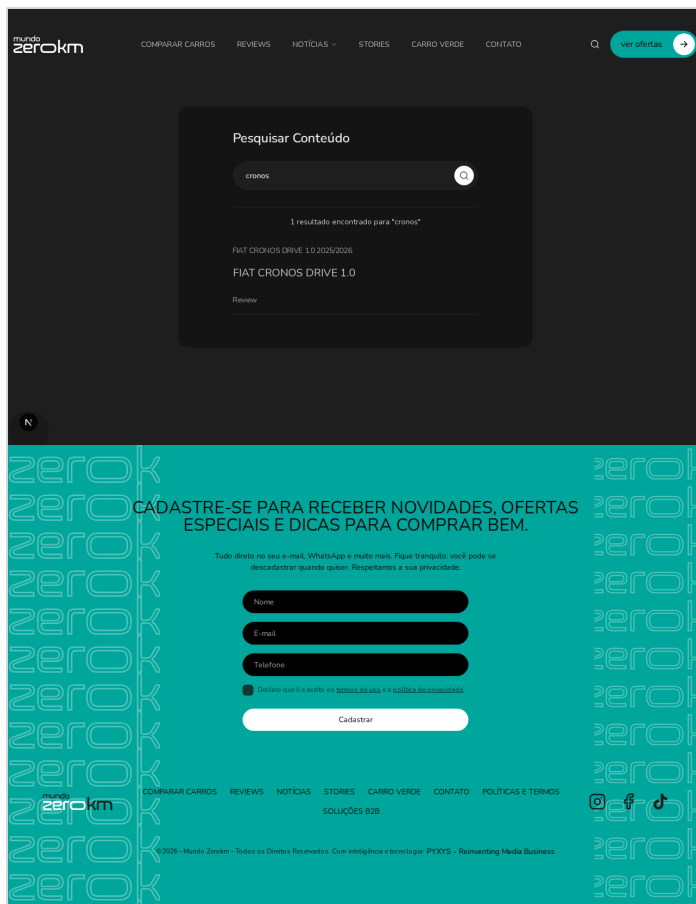

evidencias/CT14-cronos-log.txt

```
01. goto "http://localhost:3000/search?q=cronos"
   → status=200 url=http://localhost:3000/search?q=cronos
02. wait_ms 7000
03. eval ["(()=>{const t=Array.from(document.querySelectorAll('div')).map(d=>d.childElementCount===0?d.textContent.trim():').find(t=>/resultados? encontrados?/.test(t))||null; return {contador: t, itens: document.querySelectorAll('div.mb-5.py-4').length, paginacao_presente: !!document.querySelector('nav:has([aria-label^="Ir para página"])}))", "poucos-resultados"]
   → {"contador": "1 resultado encontrado para \"cronos\"", "itens": 1, "paginacao_presente": false}
04. print_full "cronos"
```

evidencias/CT14-poucos-resultados.txt

```
// http://localhost:3000/search?q=cronos
// (()=>{const t=Array.from(document.querySelectorAll('div')).map(d=>d.childElementCount===0?d.textContent.trim():').find(t=>/resultados? encontrados?/.test(t))||null; return {contador: t, itens: document.querySelectorAll('div.mb-5.py-4').length, paginacao_presente: !!document.querySelector('nav:has([aria-label^="Ir para página"])}))}()
{
  "contador": "1 resultado encontrado para \"cronos\"",
  "itens": 1,
  "paginacao_presente": false
}
```

evidencias/CT14-cronos.png

CT15 — Decisão do 301 baseada no Search Console

pendente

Critério: CA5

Tipo: Processo

Passos: Pedir ao dev o relatório do Search Console e a decisão registrada; conferir comportamento atual de /ofertas?page=3.

Esperado: Evidência da decisão existe, ou D1 tratada.

Observado: Comportamento atual: 301 automático. /ofertas?page=3 → /ofertas/page/3; com filtro/UTM → /ofertas/page/3?brands=gwm&utm_source=teste (preservados); page=1 → /ofertas?brands=gwm; page=abc e page=0 → 200 sem redirect. Nenhuma evidência de relatório do Search Console nem de decisão registrada foi apresentada (D1 em aberto). Pendente até o dev anexar a evidência ou tratar a D1.

CT17 — 308 da página 1 e 404 de página inválida/fora do range

divergente

Critério: EXTRA

Tipo: API

Passos: GET /x/page/1, /noticias/page/0, /page/abc, /page/2.5 e última+1.

Esperado: 308 para a base; 404 nos inválidos.

Observado: 308 da página 1 → base OK nas 6 seções, com query preservada. Página inválida (0, -1, 2.5, abc) e fora do range (noticias/39, lancamentos/999, ofertas/99, autores/99): HTTP 200 com not-found injetado durante o streaming (soft 404), com <title> '— Página N' e canonical auto-referenciado para a página inexistente. 404 real só em webstories/999 e festival/99. Não é critério de aceite, mas afeta o sinal de SEO que a task busca. Ver CT17-classificacao.txt.

evidencias/CT17-noticias-page-1.txt

## Leitura
Nas rotas com loading.tsx (noticias, noticias/[cat], ofertas, autores) o notFound() roda depois que o
streaming começou: o Next injeta o boundary de not-found no corpo, mas o status já saiu 200 e o <head>
já saiu com título "– Página N" e canonical auto-referenciado para uma página que não existe.
É o mesmo mecanismo que o próprio PR contornou no middleware para o 308 da página 1
(ver comentário em src/lib/middleware/resolve-first-page-redirect.ts).
Em staging todas as páginas já saem com noindex, então não dá para ver aqui se o Next injeta
<meta name="robots" content="noindex"> nesses casos. Confirmar com `next build && next start`.
```

CT18 — Lighthouse SEO nas páginas 1 e 2 das 6 seções

confirmado

Critério: EXTRA

Tipo: API

Passos: Lighthouse 12 (mobile) em <base> e <base>/page/2 de cada seção; comparar audits de SEO entre página 1 e página 2.

Esperado: Página 2 sem regressão de SEO em relação à página 1 (title, meta description, canonical válido, links rastreáveis). 'Blocked from indexing' é esperado no ambiente de staging.

Observado: SEO da página 2 = SEO da página 1 nas 6 seções (58 em noticias/categoria/ofertas/autor, 69 em webstories/festival): a paginação não regrediu SEO. 'Blocked from indexing' vem da flag de staging. ACHADO fora do escopo da PR: nas rotas com loading.tsx (noticias, categoria, ofertas, autor) a meta description e o canonical ficam no <body> para Chrome e Googlebot (streaming metadata do Next 16) e o Lighthouse não os detecta. Afeta igual as páginas 1 e 2.

Leitura

- SEO: página 2 tem o mesmo score da página 1 em todas as 6 seções. Sem regressão da paginação.
- 'Page is blocked from indexing' em todas: flag de staging (x-robots-tag/meta robots noindex). Esperad o neste ambiente.
- Meta description/canonical não detectados só em noticias, categoria, ofertas e autor, que são as rota s com loading.tsx.

No DOM renderizado, <title>, description e canonical ficam no <body> (streaming metadata do Next 16) para Chrome comum e Googlebot.

Para bingbot e facebookexternalhit ficam no <head>. Afeta igual as páginas 1 e 2 e não vem da paginaç ão: investigar em task separada.

- Performance: next dev (sem minificação, com HMR) distorce LCP/TBT. Esses números não valem como mediç ão. Refazer em build de produção.

Rotas com loading.tsx no branch: src/app/autores, src/app/noticias, src/app/noticias/[categoriaId], sr c/app/ofertas (e review). Sem loading.tsx: webstories, festival-do-carro-verde. Isso bate exatamente co m as seções onde a meta description e o canonical não são detectados.

CT19 — Lighthouse Performance nas páginas 1 e 2 das 6 seções

pendente

Critério: EXTRA

Tipo: API

Passos: Mesmas execuções do CT18; registrar score e métricas (FCP, LCP, TBT, CLS, SI).

Esperado: Números válidos só em build de produção (next build && next start). Em next dev, registro indicativo.

Observado: Executado em next dev: Perf 12–60, LCP 1,9–30,8 s, TBT 1,5–4,0 s (tabela no comparativo). Esses números não valem como medição de performance (sem minificação, com HMR). Pendente de execução em build de produção (next build && next start) ou staging. Diferença p1 → p2 dentro do ruído, exceto ofertas (38 → 12), a confirmar em produção.

```
# Lighthouse 12.8.2 · mobile · localhost:3000 (next dev, flags de staging) · branch pr-516 @ 5d643ca7
```

6. Texto original da task

[Mundo ZeroKM] Padronização de Paginação: URLs, Links Rastreáveis e Componente Único

Objetivo: Padronizar todas as listagens paginadas do site — URL própria em path (/page/n), canonical auto-referenciado por página, link real (<a href>/<Link href>) — consolidando as implementações num único componente de paginação reutilizável, e reaproveitar esse componente em /search para resolver o problema de performance/UX (sem exigência de URL/canonical, página segue noindex).

Requisitos:

- Componente único com controles <Link href> real, usado nas 6 seções com URL + /search.
- Notícias: trocar useState por navegação real em /noticias/page/[n].
- Ofertas: migrar ?page=n para /ofertas/page/n; filtros como query (/ofertas/page/2?brands=toyota); link real; avaliar 301 das URLs ?page= indexadas (checar Search Console antes).
- Webstories: trocar <button onClick> por link real.
- Notícias por categoria: rota SSR /noticias/[categoriaId]/page/[n].
- Autores: rota SSR /autores/[slug]/page/[n].
- Festival do Carro Verde: rota SSR equivalente.
- /search: reaproveitar o componente para paginar client-side (segue noindex).

Critérios de aceite:

- Toda página paginada (Notícias, Notícias-categoria, Ofertas, Webstories, Autores, Festival do Carro Verde) tem URL própria em path (/page/n) acessível via link real, verificável via view-source sem depender de JS.
- Canonical de cada página aponta para si mesma, nunca para a página 1 (exceto a própria página 1).
- Um único componente de paginação é usado nas 6 seções com URL + /search (client-side).
- /search pagina os resultados sem regressão de UX, sem exigir mudança de indexação (segue noindex).

- Decisão de redirect 301 para ?page= de Ofertas já indexadas, tomada com base em relatório do Search Console (não automática).

Fora de escopo: noindex/tiering de filtros; rel=next/prev; infinite scroll; truncamento visual dos números e 6 → 15 itens; canonical de Reviews; layout visual dos controles (a anexar por Vinicius).

Em aberto: URLs /ofertas?page=N indexadas (Search Console, 301 caso a caso); volume médio de /search para tamanho de página; comportamento real de categoria/autores/festival.
